

Push/Twist Hand Control *(right side) with AutoLock*

The Sure Grip Push/Twist right-hand side control uses the same motorcycle style acceleration as other Push/Twist controls, but has an auxiliary handle that makes the twisting motion easier and allows for longer, more comfortable driving.

In addition to the unique benefits enjoyed with our other hand controls, such as increased leg room and ease of use, drivers will also appreciate the other features that the Sure Grip Push/Twist offers including:

- Limited modifications to the vehicle dash
- Easier braking
- Superior pedal feel, with constant acceleration and no “dead spots”

AutoLock, is an accelerator lock out device that comes standard on all of Sure Grip’s hand controls, and is an added safety feature for the driver or those that share the vehicle. By sliding the locking lever to the left, the accelerator function of the hand control can be disabled and help prevent accidents through misuse of the control by mechanics, valets or any other unqualified user.

AutoLock is available in both electronic and manual formats.
